

Programming the DataLogic QuickScan Hand Held Scanner

The DataLogic scanners are programmed in a similar fashion to the previously used SICK scanners using a series of barcodes. It is necessary to add prefix and suffix characters (! and #) to the codes. Before commencing this configuration it is necessary to enable Code 93.

If you make a mistake scan the Cancel.

Code 93 is now available.

To configure the scanner, scan each code in order with a slight pause between scans

The prefix and suffix programming begins here.

ENTER/EXIT PROGRAMMING MODE

Set Global Suffix

2

3

ENTER/EXIT PROGRAMMING MODE

ENTER/EXIT PROGRAMMING MODE

Test Codes.

Code 128-A

Code 128-B

Code 39

Code 93

Open a text editor such as notepad and scan each test code.

In each case you should see the code with the prefix and suffix: !KTBFF10123#
